

COMMAND PLATFORM · MADE IN SOUTH AFRICA

Swiss Guard.

The all-in-one security operations platform — communication, compliance, command.

Replace your radios, your WhatsApp groups, your paper occurrence books, your Excel sheets and your standalone CRM — with one unified system that talks to itself.

Unified Comms

PTT · Web Chat · Panic

Live Operations

Bookings · Patrols · Visits

Compliance

PSIRA · SOPs · Audit

Document Control

Employee & site documents

Investigations

Evidence repository

Business

Sales CRM · Stores · Roster

Simpler than WhatsApp. Secured. Integrated.

WhatsApp groups lose context. Radios don't write to a record. Phone calls disappear. Swiss Guard gives you **three communication channels in one app** — every message, voice note and panic alert logged, searchable, and tied to the site it came from.

01

Push-to-Talk (PTT)

Live voice broadcast to one site, a custom group, or every site. Each transmission saves automatically as a permanent voice note in the receiving site's chat.

→ **One app, no separate radio fleet**

02

Web Chat

Real-time site-room messaging with the control room. Text, voice notes, shift handover. No lost messages in scrollbar. Every conversation searchable.

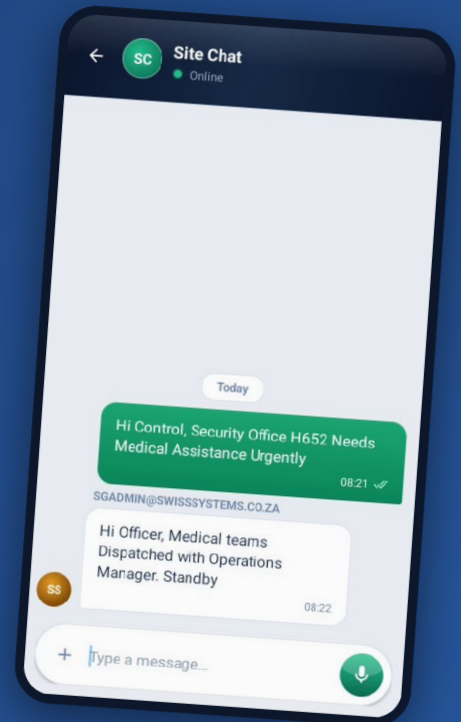

→ **Replaces WhatsApp, ends the chaos**

03

Panic Button (SOS)

One-tap panic from the mobile app with site, GPS and timestamp. SMS auto-dispatches to the site's emergency contact and armed response. Every alert recorded.

→ **Time-stamped, data-stamped, audit-ready**

One app. Every job an officer does.

Most companies issue their guards three or four apps — one for clocking in, one for incidents, one for panic, one for radio. Swiss Guard does **all of it** in a single, simple, offline-tolerant Android app.

SIGN IN

Site-level credentials. Officers sign into their site, not the platform.

ON DUTY

Live shift status with patrol countdown, last log, SOS button, and PTT.

OCCURRENCE

Hourly check-ins logged with severity, photo evidence and full audit trail.

INCIDENT

Security events captured in detail and routed to the control room instantly.

What guards do, captured live.

Every action a guard takes on the floor — booking on duty, walking a patrol, logging an occurrence — is captured in the moment, with photo evidence and GPS, and visible to the control room within seconds. **No paper. No back-capture. No "I forgot to log it."**

04

Booking On Duty with Photo Validation

Guards book in via the mobile app with a live photo and GPS. The control room sees who arrived, when, from which device, and where. Real-time attendance, real proof.

→ **End buddy-clocking forever**

05

Real-Time Patrols with Picture-Point Validation

Guards scan patrol points and capture a photo at each one. The Live Patrol Dashboard shows Not Started, In Progress, Completed and Missed in real time — flagged for control room comment.

→ **Walk the route. Prove the route.**

06

Digital Occurrence Books

Replace the paper site book with a digital occurrence log. Every entry timestamped, GPS-tagged, photo-attached, searchable, and exportable to PDF or CSV for client reports.

→ **Save paper. Get a real report.**

07

Investigations Repository

A dedicated home for every incident under investigation. Upload photos, statements, video, witness records and supporting documents. One thread per case, fully audited.

→ **Build defensible cases**

08

Site Visit History & Reporting

Every management site visit captured with arrival time, GPS, notes, photos and follow-ups. Generate visit reports per site, per manager, per month — for client review or internal QA.

→ **Prove the visits actually happened**

09

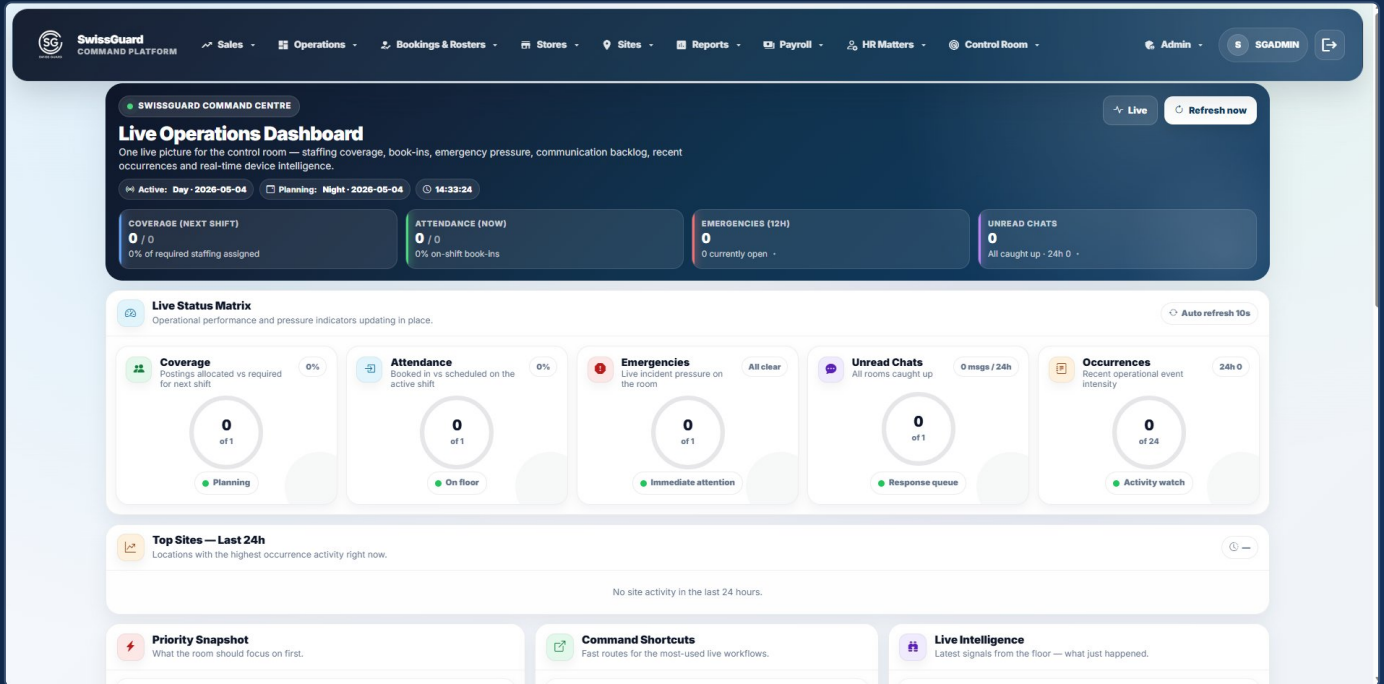

Booking History with Hours Tracking

Every shift, every guard, every minute on duty — captured automatically. Generate hours-worked reports for payroll, client billing and overtime calculations without spreadsheets.

→ **Payroll truth, not an estimate**

One screen. Everything that matters.

Coverage. Attendance. Emergencies. Unread chats. Site activity. The Swiss Guard Command Centre is the single live view your control room operator needs to run a shift — refreshing every ten seconds, surfacing what needs action first.

COVERAGE

Required vs assigned guards for the next shift, before the gap becomes a problem.

ATTENDANCE

Who's actually on the floor right now — booked in with photo and GPS proof.

EMERGENCIES

Open emergencies in the last 12 hours. Active count never lies.

Audit-ready, every day.

Missed PSIRA renewals, unsigned SOPs, missing risk assessments, and unverified guards cost contracts and lose tenders. Swiss Guard makes compliance the default, not the scramble.

10

PSIRA Quick Verify Button

One click on the personnel record and Swiss Guard pulls live truth from PSIRA — names, grade, expiry, certificate status, employer. **No more logging into the PSIRA portal one employee at a time.**

→ **Verify hundreds of guards in minutes, not days**

11

Document Control Centre — Employees

A turn-key document repository for every guard: ID copies, contracts, training certificates, appointment letters, induction records. Expiry alerts before things lapse. Upload once, find forever.

→ **Find any document in 10 seconds**

12

Document Control Centre — Customer Sites

Every site's SOPs, training letters, risk assessments, post orders, emergency procedures — all version-controlled and searchable. Field officers see only the documents relevant to their site.

→ **SOP-driven action, every time**

13

User Management & Role-Based Access

Eight roles out of the box — SuperAdmin, Admin, Payroll, HR, Operations, Control Room, Sales, Stores. Each one sees only what they need. Add or remove access in seconds, not by IT ticket.

→ **Right people, right data, right now**

14

Audit Trace Logs

Every change to every record captured automatically — who, when, old value, new value, reason. Login activity tracked with IP and session duration. Pass client audits, ISO reviews, and internal investigations without scrambling.

→ **A defensible record on every action**

15

Full Roster Module

Build recurring multi-week rosters, manage planning periods, and roll postings forward automatically. Roster changes feed straight into postings and book-ins — no double capture, no version drift.

→ **Plan once. Run for weeks.**

Sales, stores, and the office.

Most security platforms stop at operations. Swiss Guard goes further — full CRM for the sales team, full inventory and asset issuing for stores, and full roster planning for operations. **One system, top to bottom.**

16

Full Sales CRM

Telesales leads, captured prospects, quoted deals, conversion tracking, top-rep reporting, scheduled meetings. Pipeline pressure, quoted value, won revenue — one commercial dashboard the whole team works from.

→ **Lead to signed contract, in one platform**

17

Stores — Officer Asset Tracking

Track every uniform, radio, baton, torch, body armour and piece of kit issued to each guard. Top Officer Holdings shows who has what. Outstanding-holdings alerts catch leavers who haven't returned kit.

→ **Stop losing money to forgotten kit**

18

Stores — Site Equipment Tracking

Issue equipment to customer sites — site radios, panic buttons, signage, alarm components — and reconcile what's been issued against what's been returned. Decommissioning a site? Pull the asset register in one click.

→ **Know what's at every site**

19

Stock Levels & GRN Receiving

Live stock-on-hand by item, with low-stock and out-of-stock alerts. Capture supplier deliveries via GRN, and the catalog updates instantly. No more paper delivery notes.

→ **Reorder before you run out**

20

Live Device Map & Fleet View

Every Swiss Guard mobile device on a live map of South Africa. Live, Stale GPS, Site fallback, and No session — sorted by tier so the control room sees problems first. Drift detection, last-seen timestamps, signal health.

→ **See your whole fleet at a glance**

21

Payroll Workflows

Leave requests with form attachments, banking change requests with proof, salary advances against future earnings, payroll queries with response trails. Anonymous tip-off channel for officers reporting peers.

→ **The whole pay-day workflow**

Swiss Guard integrates every sphere of security into one system — document control, risk, compliance, SOP-driven action, payroll and planning — so officers work simpler, management sees clearer, and clients get reporting that actually means something.

— THE SWISS GUARD PROMISE

READY WHEN YOU ARE

Run a tighter operation tomorrow.

Book a 30-minute live demo. We'll show you Swiss Guard running on a real workload, and answer every question — including the awkward ones about migration, training and pricing.

01

Built for South Africa

PSIRA quick-verify, mobile-first for the field, Android-ready devices — designed locally, for local realities.

02

Live, Not Lagged

Real-time SignalR updates, mobile-first capture, automatic dashboard refresh. No Monday-morning surprises.

03

Truly Integrated

Comms, ops, compliance, sales, stores, payroll — one unified system that talks to itself.
